The purpose of this symposium is to address the science of climate change education and discuss how best to teach about climate change within a variety of educational settings (K-12, college, and informal ed). The symposium will facilitate collaborations by increasing awareness of existing work and providing space for interaction.

Furthermore, we seek to provide graduate students with useful information about the scholarship of teaching climate change, research and job opportunities, and resources for teaching. The symposium provides a unique opportunity to bring together a diversity of academics and practitioners to facilitate a conversation on the advancement of climate change education. We look forward to your participation.

Featuring

• A panel discussion pulling together diverse expertise on efforts being made to improve climate change education
• Break-out sessions in which participants will engage in lively discussion on core concepts to address gaps in climate change education
• Speakers from organizations including Michigan State University, the University of Michigan, the Michigan Department of Environmental Quality and the National Oceanic and Atmospheric Administration
• A social hour and reception following the symposium from 4 p.m. to 5 p.m.
